

Ki-67 Proliferation Assessment Report

Patient Information

Analysis ID	0ca69df0
Analysis Timestamp	2025-11-28T17:29:15.618786
Patient Name	PT-BATCH Case 2
Patient ID	PT-BATCH-002
Age	N/A
Gender	-
Contact	
Exam Date	2025-11-28
Physician	Batch Analysis
Clinical Notes	Batch upload - File: 94.png

Cell Detection Visualization

Figure: Cell detection visualization with Ki-67 positive cells (green) and Ki-67 negative cells (red)

Analysis Results Summary

Metric	Value
Positive Cells (Ki-67+)	83
Negative Cells (Ki-67-)	41
Total Cells Detected	124
Ki-67 Proliferation Index	66.94%
Diagnosis Classification	Malignant
Risk Level	High Risk
Malignancy Status	Malignant

Manual (Ground Truth) Baseline

Positive Cells	75
Negative Cells	44
Total Cells	119
Ki-67 Index	63.03%
Classification	Malignant
Risk Level	High Risk

Quality Control Summary

Flagged for Review	No
Reason	Within acceptable tolerance
Positive Cell Δ	8
Negative Cell Δ	-3
Total Cell Δ	5
Ki-67 Δ	3.91
Ki-67 Δ (%)	6.2
Classification Match	Yes

Clinical Interpretation

Ki-67 index $\geq 30\%$ indicates high proliferative activity, consistent with malignant characteristics.
Requires aggressive treatment protocols and close monitoring.

Clinical Recommendation

Immediate oncological consultation recommended. Consider chemotherapy, targeted therapy, and surgical intervention. Regular follow-up essential.

Detection Statistics

Cell Type	Count	Percentage
Ki-67 Positive Cells	83	66.9%
Ki-67 Negative Cells	41	33.1%

Reference Information

Ki-67 Proliferation Index Interpretation Guidelines:

- <5%: Very Low Proliferation (Benign)
- 5-10%: Low Proliferation (Low Malignant Potential)
- 10-20%: Moderate Proliferation (Borderline Malignant)
- >20%: High Proliferation (Malignant)

Note: This report is generated by an AI-assisted analysis system. Results should be reviewed by a qualified pathologist and correlated with clinical findings.
